

BA2: Digital Korea

Final Paper — Grading Rubric

Total **100 points**. Companion to the assignment brief.

Writing style: **BAKS Style Guide**.

1. Research question — 15 points

Score	Criteria
13–15	Clearly stated; appropriately scoped to the corpus and methods; answer would be informative; the question shapes the rest of the paper.
10–12	Clear but slightly too broad or slightly mis-fitted to the corpus or methods. The paper still works.
6–9	Vague, over-broad, or under-specified; the reader has to guess what the paper is really about.
0–5	Missing, incoherent, or untestable with the chosen corpus.

2. Methods application & interpretation — 40 points

Score	Criteria
35–40	Methods chosen are well-suited to the question; applied correctly; output is interpreted (not just reported); findings clearly connect back to the research question; figures and tables are read carefully and what they show is articulated in plain language.
27–34	Methods correct; interpretation present but partial — the student reports outputs more than they explain them.
17–26	Methods broadly correct but execution has visible gaps (wrong preprocessing, wrong distance metric, missing diagnostic), or interpretation is confined to restating the figure caption.
0–16	Methods misapplied, results not interpreted, or output disconnected from the research question.

3. Replication repository (FAIR) — 20 points

Score	Criteria
17–20	All eight required files / folders present and well-formed; README explains the project and how to reproduce; a fresh clone reproduces the paper's figures; structure clearly follows F-A-I-R.
13–16	Most required files present; minor gaps (missing CITATION.cff, sparse README, undocumented script). Reproducible with effort.
8–12	Repo exists and is public, but missing several required artifacts; README is too sparse to follow; reproduction would require guesswork.
0–7	Repo missing, private, or contains essentially nothing reproducible.

Spot-check policy: I clone two or three replication repositories per cohort on a fresh machine and re-run the analysis. Reproducibility failures count against this component.

4. Writing quality & structure — 15 points

Score	Criteria
13–15	Reads as a scholarly research report; sections do what their headings promise; citations are consistent (any common style is fine); prose is clear; figures are labeled and referred to in the text.
10–12	Mostly clear; minor structural or citation inconsistencies.
6–9	Significant clarity, structure, or citation problems; reader has to work to follow the argument.
0–5	Hard to follow as a coherent research report.

5. Brief literature review — 10 points

Score	Criteria
9–10	3–5 sources cited including at least one methods source; sources situate the question rather than survey the field; cited works actually engage with the paper's argument.
6–8	Right number of sources but one or two are tangential or only cosmetically cited.
3–5	Too few sources, or sources are irrelevant to the question, or no methods source.
0–2	Lit review missing or ornamental.

A failing total qualifies for a re-sit per the standing course policy.
